SUMMARY

Flutter Software Engineer specializing in building scalable cross-platform mobile apps with Clean Architecture, BLoC, and Supabase. Experienced in API integration, automated workflows, and high-performance app deployment.

SKILLS

- Languages: Dart, Python, PHP, SQL
- Mobile Development: Flutter, Material 3, Responsive UI, Custom Widgets, App Lifecycle
- Architecture & Patterns: Clean Architecture, SOLID Principles, Repository Pattern, Dependency Injection (GetIt)
- State Management: BLoC, Cubit, Provider
- Backend & Databases: Supabase, PostgreSQL, Authentication, Row Level Security (RLS), Realtime Streams
- Networking & Data: RESTful APIs, Dio, HTTP, JSON Parsing, Asynchronous Programming
- DevOps & Tools: Git, GitHub Actions, CI/CD, VS Code, Postman, Figma

WORK EXPERIENCE

Flutter Software Engineer | Freelance

Aleppo, Syria | 2024 – Present

- Deployed 3+ production mobile apps using Flutter and Dart with 99.9% crash-free sessions.
- Integrated 15+ RESTful APIs and Supabase services with PostgreSQL and RLS security policies.
- Architected 40+ modular UI components using Material 3, cutting code duplication by 30%.
- Automated CI/CD deployment pipelines via GitHub Actions, reducing delivery time by 40%.
- Applied SOLID principles and GetIt dependency injection to achieve 85%+ code maintainability.

PROJECTS

Rego – Smart Restaurant Management Ecosystem | Flutter, Supabase, Gemini

- Engineered a dual-app system (Admin Dashboard & Customer Ordering) handling 100+ real-time orders.
- Designed a relational PostgreSQL database on Supabase, cutting query response time by 25%.
- Integrated Gemini AI and n8n webhooks for automated nutrition scoring with under 2-second latency.
- Applied Clean Architecture and BLoC pattern, reducing app memory usage by 20%.

Swift Chat – Real-time Social Platform | Flutter, Clean Architecture, BLoC, Supabase

- Developed a messaging app achieving sub-second real-time message delivery via Supabase Streams.
- Implemented 10+ core social features including live chat, posts, media sharing, and comments.
- Leveraged Supabase Storage for media file uploads, improving transfer speeds by 35%.
- Structured 25+ reusable UI components adhering to modular software development standards

E-Commerce Store Application | Flutter

- Engineered a scalable e-commerce application integrating APIs, featuring interactive product browsing, category filtering, and advanced search.
- Implemented robust local storage persistence strategies to secure user session data, profile details, and shopping cart states across app restarts.
- Orchestrated complex state management using BLoC to handle multi-user session isolation and real-time cart synchronization.
- Optimized network performance and UI rendering with custom animations, error-handling mechanisms, and efficient lazy-loading lists.

Smart School System | Flutter, REST APIs, Dio, Cubit

- Created a multi-role Flutter application serving teachers, students, and school administrators.
- Built push notification features delivering schedules and exam updates to 1,000+ users instantly.
- Integrated 12+ RESTful APIs via Dio with custom interceptors, cutting API error bugs by 40%.
- Managed application state using Cubit state management to maintain steady 60 FPS performance.

EDUCATION

Bachelor's Degree in Informatics Engineering

University of Aleppo | Graduated

ADDITIONAL INFORMATION

- Competitive Programming: Active participant on Codeforces using Python, utilizing data structures, algorithms, and logical reasoning to build optimized code solutions.
- Languages: Arabic (Native), English (Professional Working Proficiency).
